An Architecture of the Seven Senses

Juhan Pallasmaa

INTRODUCTION
In the following essay, Juhan Pallasmaa probes the sensual nature of architecture and interiors by examining places that present their accumulated history, such as his grandfather's barn, with a distinct patina made visible to the senses. By describing these places and their pasts, Pallasmaa uncovers embedded senses of sight, sound, smell, taste, touch, and a sense of movement he describes as skeleton and muscle. By looking at the materials, details, and events that have occurred inside these structures, Pallasmaa poetically uncovers the sense-based qualities that contribute to the particularity of architecture.

Referring to personal experiences allows Pallasmaa to focus on the interiors, what he considers to be collections of sensory experiences that were realized through emphasis on materials. For example, different qualities of sound are heard in a vacant room than in one filled with furniture, textiles, and personal possessions. The former room reflects sound while the latter's solid volumes and soft materials absorb it.

The atmospheric qualities Pallasmaa brings to his description of interiors are material characteristics that develop with time and use, and cannot be forced into new construction. The properties of such materials, those that accumulate an authentic patina through use, create a condition of mutual dependence. These interior details embody a collection of stories. When Pallasmaa describes the narratives of place in romantic, anthropomorphic observations like the "door handle is the handshake of the building...we shake the hands of countless generations..." he nurtures the notion that we are humbled by a simple detail such as a door handle that has received the hands of people before us. He reminds us of our body's temporary occupation and stewardship in architecture and interiors.

Pallasmaa's closely read details reveal an appreciation for the scalar relationship between body and construction. The body's cadence as it moves up and down stairs or the feeling of their resistance to material elements and they record the Manufactured on scale of 1:1, and as they are the repository for memories and place in architectural literature.

Retinal Architecture
The architecture of our time: Architecture at large has been redefined, for the human body and its surroundings are immaterial, and our material existences are devoid of the authenticity of the retinal. As buildings lose the guage and wisdom of the body, they are relined and have evolved in the realm of vision. With the nature of time; matter exists in the realm of glass, enamel, and unyielding surfaces to the essence or age.

Beyond architecture, a kind of chilling human relation to reality, integrity, and instead of inviting quently signal a distancing. The current over-emphasis of architecture further sensual and embodied esses...
seven Senses

up and down stairs or the force needed to open a door relies upon muscles and their resistance to materials. Repetitive use inscribes the body onto interior elements and they record the body’s presence over time.

Manufactured and crafted parts of the interior are experienced at the scale of 1:1, and as they are normally situated in rooms, the interior becomes the repository for memories of fully embodied sensory experiences. Pallasmaa draws out familiar senses—memories of the interior that are rarely expressed in architectural literature.

Retinal Architecture and Loss of Plasticity
The architecture of our time is turning into the retinal art of the eye. Architecture at large has become an art of the printed image fixed by the hurried eye of the camera. The gaze itself tends to flatten into a picture and lose its plasticity; instead of experiencing our being in the world, we behold it from outside as spectators of images projected on the surface of the retina.

As buildings lose their plasticity and their connection with the language and wisdom of the body, they become isolated in the cool and distant realm of vision. With the loss of tactility and the scale and details crafted for the human body and hand, our structures become repulsively flat, sharp-edged, immaterial, and unreal. The detachment of construction from the realities of matter and craft turns architecture into stage sets for the eye, devoid of the authenticity of material and tectonic logic.

Natural materials—stone, brick and wood—allow the gaze to penetrate their surfaces and they enable us to become convinced of the veracity of matter. Natural material expresses its age and history as well as the tale of its birth and human use. The patina of wear adds the enriching experience of time; matter exists in the continuum of time. But the materials of today—sheets of glass, enameled metal and synthetic materials—present their unyielding surfaces to the eye without conveying anything of their material essence or age.

Beyond architecture, our culture at large seems to drift toward a distancing, a kind of chilling, de-sensualization and de-eroticization of the human relation to reality. Painting and sculpture have also lost their sensuality, and instead of inviting sensory intimacy, contemporary works of art frequently signal a distancing rejection of sensuous curiosity.

The current over-emphasis on the intellectual and conceptual dimensions of architecture further contributes to a disappearance of the physical, sensual and embodied essence of architecture.
Architecture of the Senses
In Renaissance times, the five senses were understood to form a hierarchical
system from the highest sense of vision down to the lowest sense, touch.
The system of the senses was related to the image of the cosmic body; vision
was correlated to fire and light, hearing to air, smell to vapor, taste to water,
touch to earth.

Man has not always been isolated in the realm of vision; a primordial
dominance of hearing has gradually been replaced by that of vision. In his
book *Orality & Literacy* Walter J. Ong points out that “The shift from oral
to written speech is essentially a shift from sound to visual space...print
replaced the lingering hearing-dominance in the world of thought and
expression with the sight-dominance which had its beginning in writing....
This is an insistent world of cold, non-human facts.”

Every touching experience of architecture is multi-sensory; qualities
of matter, space and scale are measured equally by the eye, ear, nose, skin,
tongue, skeleton and muscle. Architecture involves seven realms of sensory
experience which interact and influence each other.

In the words of Merleau-Ponty, “We see the depth, speed, softness
and hardness of objects—Cezanne says we see even their odor. If a painter
wishes to express the world, his system of color must generate this indivisible
complex of impressions, otherwise his painting only hints at possibilities
without producing the unity, presence and unsurpassable diversity that gov-
erns the experience and which is the definition of reality for us.”

A walk through a forest or a Japanese garden is invigorating and healing
because of the essential interaction of all sense modalities reinforcing
each other; our sense of reality is thus strengthened and articulated.

Images of one sensory realm feed further imagery in another modality.
In *The Book of Tea* Kakuzo Okakura gives a fine description of the multi-sen-
sory imagery evoked by the extremely simple situation of the tea ceremony,
“...quiet reigns with nothing to break the silence save the note of the boil-
ing water in the iron kettle. The kettle sings well, for pieces of iron are so
arranged in the bottom as to produce a peculiar melody in which one may
hear the echoes of a cataract muffled by clouds, of a distant sea breaking
among the rocks, a rainstorm sweeping through a bamboo forest, or of the
soughing of pines on some faraway hill.”

The senses do not only mediate information for the judgment of the
intellect; they are also a means of articulating sensory thought.

Acoustic Intimacy
One who has half-risen to the sound of a distant train at night and, through
his sleep, experienced the space of the city with its countless inhabitants
scattered around its structures, knows the power of sound to the imagination;
the nocturnal whistle of a city. Anyone who has been darkness of a ruin can attes

the nocturnal whistle of a train makes one conscious of the entire sleeping city. Anyone who has become entranced by the sound of water drops in the darkness of a ruin can attest to the extraordinary capacity of the ear to carve a volume into the void of darkness. The space traced by the ear becomes a cavity sculpted in the interior of the mind.

We can recall the acoustic harshness of an uninhabited and unfurnished house as compared to the affability of a lived home in which sound is refracted and softened by the surfaces of numerous objects of personal life. Every building or space has its characteristic sound of intimacy or monumentality, rejection or invitation, hospitality or hostility.

Sight makes us solitary, whereas hearing creates a sense of connection and solidarity; the gaze wanders lonesomely in the dark depths of a cathedral, but the sound of the organ makes us realize our affinity with the space. We stare alone at the suspense of the circus, but the burst of applause after the relaxation of suspense unites us to the crowd. The sound of church bells through the streets makes us aware of our citizenship. The echo of steps on a paved street has an emotional charge because the sound bouncing off the surrounding walls puts us in direct interaction with space; the sound measures space and makes its scale comprehensible. We stroke the edges of the space with our ears. But, the contemporary city has lost its echo.

Silence, Time and Solitude
However, the most essential auditory experience created by architecture is tranquility. Architecture presents the drama of construction silenced into matter and space; architecture is the art of petrified silence. After the clutter of building has ceased and the shouting of workers has died away, the building becomes a museum of a waiting, patient silence. In Egyptian temples we encounter the silence of the pharaohs, in the silence of a Gothic cathedral we are reminded of the last dying note of a Gregorian chant, and echo of Roman footsteps has just faded on the walls of the Pantheon.

An architectural experience silences all external noise; it focuses attention on one’s very existence. Architecture, as all art, makes us aware of our fundamental solitude. At the same time, architecture detaches us from the present and allows us to experience the slow, firm flow of time and tradition. Buildings and cities are instruments and museums of time. They enable us to see and understand the passing of history.

Architecture connects us with the dead; through buildings we are able to imagine the bustle of the medieval street and fancy a solemn procession approaching the cathedral. The time of architecture is a detained time; in the greatest of buildings time stands firmly still. Time in the Great Peristyle at Karnak has petrified into a timeless present.
Experiencing a work of art is a private dialogue between the work and the viewer that excludes other interactions. "Art is made by the alone felt the alone," as Cyril Connolly writes in *The Unquiet Grave*. Melancholy lies beneath moving experiences of art; this is the tragedy of beauty's immaterial temporality. Art projects an unattainable ideal.

**Space of Scent**

The strongest memory of a space is often its odor; I cannot remember the appearance of the door to my grandfather's farm-house from my early childhood, but I do remember the resistance of its weight, the patina of its wood surface scarred by a half century of use, and I recall especially the scent of home that hit my face as an invisible wall behind the door.

A particular smell may make us secretly re-enter a space that has been completely erased from the retinal memory; the nostrils project a forgotten image and we are enticed to enter a vivid daydream.

"...Memory and imagination remain associated," Gaston Bachelard writes. "I alone in my memories of another century can open the deep cupboard that still retains for me alone that unique odor, the odor of raisins, drying on a wicker tray. The odor of raisins! It is an odor that is beyond description, one that it takes a lot of imagination to smell."

And what a delight to move from one realm of odor to the next in the narrow streets of an old town; the scent sphere of a candy store makes one think of the innocence and curiosity of childhood; the dense smell of a shoemaker's workshop makes one imagine horses and saddles, harness straps and the excitement of riding; the fragrance of a bread shop projects images of health, sustenance and physical strength, whereas the perfume of a pastry shop makes one think of bourgeois felicity.

Why do abandoned houses always have the same hollow smell; is it because the particular smell is caused by the visual emptiness observed by the eye?

In his *Notebooks of Malte Laurids Brigge*, Rainer Maria Rilke gives a dramatic description of images of past life in an already demolished house conveyed by traces imprinted on the wall of its neighboring house. "There were the midday meals and sicknesses and the exhalations and the smoke of years, and the sweat that breaks out under the armpits and makes the garments heavy, and the stale breath of mouths, and the oily odour of perspiring feet. There were the pungent tang of urine and the stench of burning soot and the grey reek of potatoes, and the heavy, sickly fumes of rancid grease. The sweetish, lingering smell of neglected infants was there, and the smell of frightened children who go to school and the stuffiness of the beds of nubile youths."

Contemporary imagery pared to the emotional and

Contemporary images of architecture appear sterile and lifeless as com-
pared to the emotional and associative power of Rilke’s olfactory imagery.

The Shape of Touch
The skin reads the texture, weight, density and temperature of matter. The
surface of an old object, polished to perfection by the tool of the craftsman
and the assiduous hands of its users, seduces the stroking of our hand. It is
pleasurable to press a door handle shining from the thousand hands that
have entered the door before us; the clean shimmer of ageless wear has
turned into an image of welcome and hospitality. The door handle is the
handshake of the building. The tactile sense connects us with time and tra-
dition; through marks of touch we shake the hands of countless generations.

The skin traces spaces of temperature with unerring precision; the
cool and invigorating shadow under a tree or the caressing sphere of warmth
in a spot of sun. In my childhood-images of the countryside, I can vividly
recall walls against the angle of the sun, walls which intensified the heat of
radiation and melted the snow, allowing the first smell of pregnant soil to
announce the approach of summer. These pockets of spring were identified
by the skin and the nose as much as by the eye.

We trace the density and texture of the ground through our soles.
Standing barefoot on a smooth glacial rock by the sea at sunset and sensing
through one’s soles the warmth of the stone heated by the sun is a healing
experience; it makes one part of the eternal cycle of nature. One senses the
slow breathing of the earth.

There is a strong identity between the skin and the sensation of home.
The experience of home is essentially an experience of warmth. The space of
warmth around a fireplace is the space of ultimate intimacy and comfort. A
sense of homecoming is never stronger than seeing a light in the window of
a house in a snow-covered landscape at dusk; the remembrance of its warm
interior gently warms one’s frozen limbs. Home and skin turn into a single
sensation.

But the eye also touches; the gaze implies an unconscious bodily mime-
sis, identification. Perhaps, we should think of touch as the unconscious of
vision. Our gaze strokes distant surfaces, contours and edges, and the uncon-
scious tactile sensation determines the agreeableness or unpleasantness of the
experience. The distant and the near are experienced with the same intensity.

Great architecture offers shapes and surfaces molded for the pleasurable
touch of the eye.

The eye is the sense of separation and distance, whereas touch is the
sense of nearness, intimacy and affection. During overpowering emotional
states we tend to close off the distancing sense of vision; we close our eyes
when caressing our loved ones. Deep shadows and darkness are essential, because they dim the sharpness of vision and invite unconscious peripheral vision and tactile fantasy. Homogeneous light paralyzes the imagination in the same way that homogenization eliminates the experience of place.

In his In Praise of Shadows, Jun'ichiro Tanizaki points out that even Japanese cooking depends upon shadows and is inseparable from darkness. "And when yoshiki is served in a lacquer dish, it is as if the darkness of the room were melting on your tongue." In olden times the blackened teeth of the geisha and her green-black lips and white face were also intended to emphasize the darkness and shadows of the room. In Luis Barragan's view most of contemporary houses would be more pleasant with only half of their window surface.

In emotional states, sense stimuli seem to shift from the more refined senses toward the more archaic, from vision down to touch and smell. A culture that seeks to control its citizens is likely to value the opposite direction of interface; away from the intimate identification toward the publicly distant detachment. A society of surveillance is necessarily a society of a voyeuristic eye.

**Images of Muscle and Bone**

Primitive man used his body, the dimensioning and proportioning system of his constructions. The builders of traditional societies shaped their buildings with their own bodies in the same way that a bird molds its nest by its body. The essence of a tradition is the wisdom of the body stored in the haptic memory. The essential knowledge of the ancient hunter, fisherman and farmer, as well as of the mason and stone cutter, was an imitation of an embodied tradition of the trade, stored in the muscular and tactile senses.

"The word habit is too worn a word to express this passionate liaison of our bodies, which do not forget, with an unforgettable house," writes Bachelard of the strength of bodily memory.

There is an inherent suggestion of action in images of architecture, the moment of active encounter or a promise of use and purpose. A bodily reaction is an inseparable aspect of the experience of architecture as a consequence of this implied action. A real architectural experience is not simply a series of retinal images; a building is encountered—it is approached, confronted, encountered, related to one's body, moved about, utilized as a condition for other things, etc.

Stepping stones set in the grass of a garden are images and imprints of human steps.

As we open a door, our body weight meets the weight of the door; our legs measure the steps as we ascend a stair; our hand strokes the handrail and our entire body moves diagonally and dramatically through space.

A building is not an end; it gives significance, relates, sets the scene. Consequently, elements of an art form rather than being nouns—themselves of approaching, or construction of entering and not simply ornament, rather than the wind.

In the analysis of Fra Andrea Doria's architectural essence to the Common Res ation of architectural experience: the porch or the door, for instance, The authenticity of an arc tone of building action to the senses. We behold entire bodily existence and related around the center of the memory and identity. We are environment, to the degree of Self from its spatial and situs as the poet Noel Arnaud estab The Bodily Identification

Henry Moore wrote perceptively of art, "This is what the sculptor of, and use, form in its full significance, inside his head—he is making it completely enclosed in a complex form from all round the other side is like; he is identifying its volition, the air."

The encounter of any work of art functions as another notion of projective identification. Action implies projection of painter Graham Sutherland's work, "In a sense the landscape as if it were himself—himself landscape thinks through his mind."

Similarly, an architect's balance, distance and scale vision in the muscular system
ows and darkness are essential, d invite unconscious peripheral ht paralyzes the imagination in the experience of place.

Tanizaki points out that even id is inseparable from darkness. h, it is as if the darkness of the times the blackened teeth of site face were also intended to room. In Luis Barragan’s view pleasant with only half of their to shift from the more refined down to touch and smell. A cul to value the opposite direction cation toward the publicly dis necessarily a society of a voy-

A bodily resoce of architecture as a conse erience is not simply entered—it is approached, conved about, utilized as a condi len are images and imprints of thes the weight of the door; our our hand strokes the handrail matically through space.

A building is not an end to itself; it frames, articulates, restructures, gives significance, relates, separates and unites, facilitates and prohibits. Consequently, elements of an architectural experience seem to have a verb form rather than being nouns. Authentic architectural experiences consist then of approaching, or confronting a building rather than the facade; of the act of entering and not simply the frame of the door, of looking in or out of a window, rather than the window itself.

In the analysis of Fra Angelico’s Annunciation in his essay “From the Doorstep to the Common Room” (1926), Alvar Aalto recognizes the verb essence of architectural experience; he speaks of entering a room, not of the porch or the door, for instance.

The authenticity of architectural experience is grounded in the tectonic language of building and the comprehensibility of the act of construction to the senses. We behold, touch, listen and measure the world with our entire bodily existence and the experiential world is organized and articulated around the center of the body. Our domicile is the refuge of our body, memory and identity. We are in constant dialogue and interaction with the environment, to the degree that it is impossible to detach the image of the Self from its spatial and situational existence. “I am the space, where I am,” as the poet Noel Arnaud established.

Bodily Identification

Henry Moore wrote perceptively of the necessity of a bodily identification in art, “This is what the sculptor must do. He must strive continually to think of, and use, form in its full spatial completeness. He gets the solid shape, as it were, inside his head—he thinks of it, whatever its size, as if he were holding it completely enclosed in the hollow of his hand. He mentally visualizes a complex form from all round itself; he knows while he looks at one side what the other side is like; he identifies himself with its center of gravity, its mass, its weight; he realizes its volume, and the space that the shape displaces in the air.”

The encounter of any work of art implies a bodily interaction. A work of art functions as another person, with whom we converse. Melanie Klein’s notion of projective identification suggests that, in fact, all human interaction implies projection of fragments of the Self to the other person. The painter Graham Sutherland expresses the same view in regards to his own work, “In a sense the landscape painter must almost look at the landscape as if it were himself—himself as a human being.” In Paul Cézanne’s view the landscape thinks through him and he is the consciousness of the landscape.

Similarly, an architect internalizes a building in his body; movement, balance, distance and scale are felt unconsciously through the body as tension in the muscular system and in the positions of the skeleton and inner
-organs. As the work interacts with the body of the observer the experience mirrors these bodily sensations of the maker. Consequently, architecture is communication from the body of the architect directly to the body of the inhabitant.

Understanding architectural scale implies the unconscious measuring of an object or a building with one's body, and projecting one's bodily scheme on the space in question. We feel pleasure and protection when the body discovers its resonance in space.

When experiencing a structure, we unconsciously mimic its configuration with bones and muscles; the pleasurably animated flow of a piece of music is subconsciously transformed into bodily sensations, the composition of an abstract painting is experienced as tensions to the muscular system. The structures of a building are unconsciously imitated and comprehended through the skeletal system unknowingly, as we perform the task of the column or the vault with our body. The brick wants to become a vault, as Louis Kahn has said, but this metamorphosis takes place through the mimesis of our own body.

The sense of gravity is the essence of all architectonic structures and great architecture makes us conscious of gravity and earth. Architecture strengthens verticality of our experience of the world. At the same time architecture makes us aware of the depth of earth, it makes us dream of levitation and flight.

Taste of Architecture
Adrian Stokes writes about the "oral invitation of Veronese marble." There is a subtle transference between tactile and taste experiences. Vision also becomes transferred to taste; certain colors as well as delicate details evoke oral sensations. A delicately colored polished stone surface is subliminally sensed by the tongue. Many years ago I felt compelled to kneel and touch the white marble threshold of the James residence in Carmel, California, designed by Charles and Henry Greene. Carlo Scarpa's architecture also frequently presents similar experiences of taste.

Tanizaki gives an impressive description of the subtle interaction of the senses,

"With lacquerware there is a beauty in that moment between removing the lid and lifting the bowl to the mouth when one gazes at the still, silent liquid in the dark depths of the bowl, its colour hardly differing from the bowl itself. What lies within the darkness one cannot distinguish, but the palm senses the gentle movements of the liquid, vapor rises from within forming droplets on the rim, and a fragrance carried upon the vapor brings a delicate anticipation."

The Task of Architecture
The timeless task of architecture is to create embodied existential metaphors
that concretize and structure man’s being in the world. Images of architec-
ture reflect and externalize ideas and images of life; architecture materi-
alisizes our images of ideal life. Buildings and towns enable us to structure,
understand and remember who we are. Architecture enables us to place our-
selves in the continuum of culture.

All experience implies the acts of recollecting, remembering and com-
paring. An embodied memory has an essential role as the basis of remem-
bering a space or a place. Our home and domicile are integrated with our
self-identity; they become part of our own body and being.

In memorable experiences of architecture, space, matter and time fuse
into one single dimension, into the basic substance of being, that penetrates
the consciousness. We identify ourselves with this space, this place, this
moment and these dimensions as they become ingredients of our very exis-
tence. Architecture is the art of mediation and reconciliation.
